

Technical Requests

Project Name: My Wellbeing Kit

Technical Manager: Samuel Fahey

Email: faheys@utas.edu.au

Project Overview

My Wellbeing Kit is a cross platform mobile application for Android and iOS that does not require internet access to operate and stores all data locally on the users device.

What development platform do you want to use?

- Windows
 - Use of both personal laptop computers and on campus machines
- Mac OS
 - Use of on campus machines

What development tools/compilers/programming languages do you want to use?

- Android Studio will be used to develop the Android application using Java and XML as it features an integrated virtual device emulator for debugging and testing.
- XCode will be used to develop the iOS application utilising the Swift programming language and HTML5 as iOS application development tools are heavily restricted.

What would you want installing on the School lab computers?

Nothing.

What would you want installing on the School Servers?

Nothing.

Is there anything else you want, not listed above?

No.
